

The Shed

UTAS Willis Street

The Shed at Willis Street, designed by Wardle, is an innovative facility for the University of Tasmania, dedicated to health, medicine, and science education. This building integrates robust, low-carbon materials and sustainable design principles to reflect the site's industrial heritage while promoting environmental responsibility.

In this project, Shurjoint grooved piping products were employed extensively for the plantroom and riser systems. Their reliable and durable design ensured seamless integration with the building's HVAC and water supply systems, contributing to the facility's operational efficiency and sustainability goals.
