

Hong Kong - Lei Yue Mun Quarantine Centre

The Lei Yue Mun Quarantine Centre in Hong Kong has recently begun construction with the aim of housing people identified as having been in contact with confirmed cases of Coronavirus and will be ready in just 1-2 months.

Project Profile

The project was made with Modular Integrated Construction (MIC) and due to the project requiring construction within a couple of months, the Hong Kong government decided to use our VSH Tectite Sprint range as an efficient and time saving push-fit pipe connection.
